Faster app launch

Faster app launch

Render UI before `vehicle_state` sync when minimum required state instead of blocking on full refresh during iOS startup.

products.

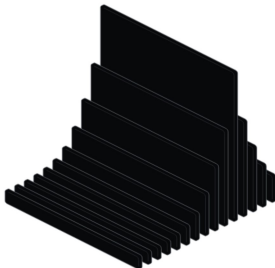

Built for purpose

Linear is shaped by the practices and principles of world-class product teams.

Powered by AI agents

Designed for workflows shared by humans and agents. From drafting PRDs to pushing PRs.

Designed for speed

Reduces noise and restores momentum to help teams ship with high velocity and focus.

Make product operations self-driving

Turn conversations and customer feedback into actionable issues that are routed, labeled, and prioritized for the right team.

Thread in #feedback

lena 3:33 AM

Anyone else noticing the iOS app feels slow to open if you haven't used it in a bit?

didier 3:33 AM

Yea, we're still blocking initial render on a full vehicle_state sync every time...

andreas 3:33 AM

Feels like we could render sooner and load the rest in the background. Probably also worth tracking startup timing so we know how often this happens!

1.4 Linear Asks

Define the product direction

Plan and navigate from idea to launch. Align your team with product initiatives, strategic roadmaps, and clear, up-to-date PRDs.

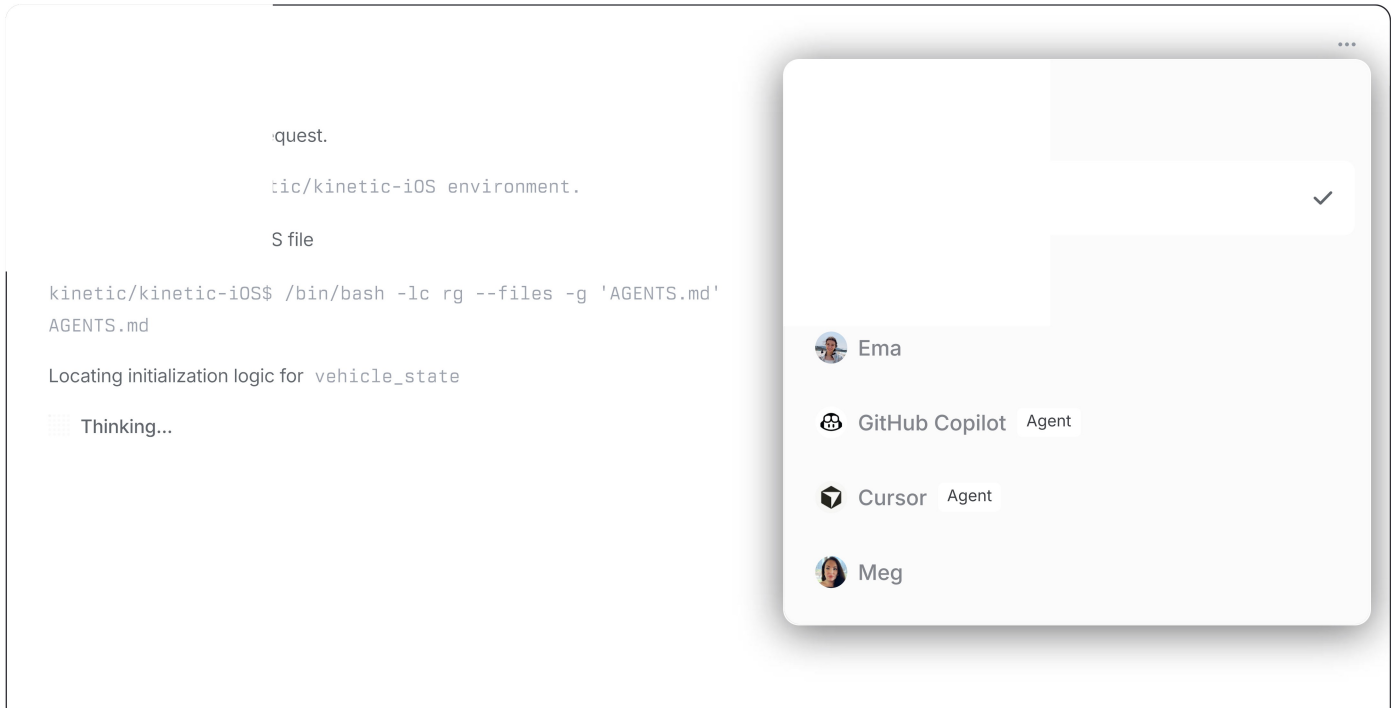

2.0 Plan →

Move work forward across teams and agents

Build and deploy AI agents that work alongside your team. Work on complex tasks together or delegate entire issues end-to-end.

3.0 Build →

Review PRs and agent output

Understand code changes at a glance with structural diffs for human and agent output. Review, discuss, and merge — all within Linear.

 kinetic-ios/src/screens/Home/HomeScreen.tsx

```
01 export const CodeReview = () => {  
02   <Diff.Provider>  
-     <Slow />  
-     <Fragmented />  
-     <HumanOnly />  
+     <Frictionless />  
+     <Integrated />  
+     <AgentReady />  
06   </Diff.Provider>  
07 };
```

Understand progress at scale

Take the guesswork out of product development with project updates, analytics, and dashboards that surface what needs your attention.
